I'm a Next.js developer with expertise in UI/UX designer who loves creating clean and user-friendly web applications. I mainly work with React,Nextjs and enjoy turning great designs into functional websites. I also have knowledge of Node.js, Express.js, and MongoDB, which helps me understand how things work on the backend. I'm always excited to learn new technologies and build projects that solve real problems

EDUCATION

Bachelor in Computer Science and Informataion Technology   Kathmandu

Sagarmatha College of Science & Technology   Feb, 2022 - Present

Studying BSc CSIT has been a great mix of theory and practical learning. I started with programming languages like C, C++, java and JavaScript, which helped me build problem-solving skills.

PROJECTS

E commerce Website

Developed an Full stack e-commerce website using MERN for buying and selling sports kits like football and cricket gear. Implemented product listings, secure payments, and a responsive UI/UX design for a smooth shopping experience across all devices.
https://github.com/ayushptk/Gameon

AI Recruiter Voice Agent

AI Recruiter Voice Agent is a smart voice-based hiring assistant built using Next.js. It automates candidate screening through voice interaction, leveraging AI to ask questions, analyze responses, and assist recruiters in making faster decisions.

Google News Clone

Google News Clone is a responsive news aggregation web app built using react. It fetches and displays the latest headlines from multiple sources, categorized by topics like technology, business, and sports, with a clean and modern UI similar to Google News.
https://github.com/ayushptk/GoogleNewsClone

Guess The Song

Created a 'Guess the Song' game where users listen to audio clips and guess the song title, with interactive animations and score updates.
